

Capabilities Statement

INFORMATION TECHNOLOGY

We offer a broad range of IT related services from requirements definition to design and implementation of secure, reliable enterprise systems. We break complex tasks into manageable challenges and delivers results that will endure into the future. SWP Systems has extensive experience in leading data center design, construction, fit out, and operations for secure, reliable, and high availability data centers.

STRATEGIES & ARCHITECTURE

SWP Systems can help you see beyond today's challenges and develop straight forward policies and processes that yield significant results.

BUSINESS CONTINUITY

No longer defined as merely the ability to survive a disaster, business continuity in today's world means ensuring that your critical capabilities remain available operational. Even minor interruptions can have major consequences.

OPERATIONS & MANAGEMENT

SWP Systems analyzes, defines, develops, and delivers operational plans that cover a wide range of business requirements. Our officers are natural leaders with significant program and project management experience. We specialize in non-traditional thinking and deliver innovative solutions.

INTELLIGENCE COMMUNITY

SWP Systems employs a staff cleared to the Top Secret/Sensitive Compartmented Information (TS/SCI) level with full lifestyle polygraphs. We provide a variety of Intelligence related services and have successfully supported mission critical programs within the Intelligence Community.

SWP Systems specializes in delivering innovative solutions and solving our customer's toughest challenges. Our team of professionals possess a unique blend of skills, knowledge, and experience that enables us to provide high level strategic insight as well as tactical implementation of our recommended solutions. We have a demonstrated history of delivering results ahead of schedule and under budget, and in many instances have helped our customers realize significant cost savings by simplifying complex problems and eliminating unnecessary components and processes.

SWP Systems offers a broad range of strategic, tactical, engineering, and integration support services. We specialize in mission assurance, mission critical facilities (such as data centers), and operational planning and support. We have been trusted agents for numerous mission critical programs within the private sector, Federal Government, and Intelligence Community.

Our extensive experience and unique insight, strengthened by practical implementation, enable us to solve our customer's toughest challenges. We have a reputation for providing comprehensive, non-biased assessments and devising cost effective solutions while maintaining complete integrity, objectivity, and trustworthiness.

Leverage our expertise:

Information Technology Services

- Data center design, optimization and management
- High-availability network and communications engineering and implementation
- Backup and recovery planning to include disaster recovery
- Information security (INFOSEC) architecture, analysis and design
- Technical requirements definition, analysis and management
- Data analysis, integrity, and conversion
- Operations and maintenance
- Primary and alternate mission critical facility design and construction management to include data center and Sensitive Compartmented Information Facility (SCIF) space compliant with applicable standards.
- Data Center design and engineering to include hardware, networking, communications and server support as well as power, cooling and wiring
- Classified network design, installation and administration

Strategies & Architecture

- Concept of Operations (CONOPS) development
- Strategic and operational planning
- Architecture design
- Policy development
- Risk/vulnerability assessments and mitigation planning
- Business consulting

Business Continuity Services

- Commercial, Government and Intelligence Community Business Continuity, Continuity of Operations (COOP) and Continuity of Government (COG) planning
- Critical Infrastructure Protection (CIP) to include facilities, Information Technology (IT), and data
- High availability solution development
- IT Disaster Recovery (DR) planning and implementation
- Secure enterprise operations to include information security (INFOSEC); Information Assurance (IA); Operational Security (OPSEC), physical and personnel security in support of classified and non-classified environments
- Facilities design and construction—renovation and new build projects—and fit out of classified and non-classified office, operations center, data center, and Sensitive Compartmented Information Facility (SCIF) space, compliant with applicable standards.

Operations & Management

- Program and project management
- Requirements definition, analysis and management
- Small and large-scale exercise planning and execution to include exercise methods and materials development
- Testing and training development and delivery
- Workflow analysis and development
- Best practice research and analysis
- Budget planning and tracking
- Quality control and assurance

Intelligence Community Services

- Fit out of classified and unclassified office, operations center, and data center space including equipment installations and operational process and procedure development.
- Mission assurance to include Continuity of Operations (COOP), Continuity of Government (COG) and IT Disaster Recovery planning and implementation
- Development and implementation of strategic plans and concepts
- Exercise planning and execution
- Risk and vulnerability assessments and studies
- Secure enterprise operations—Information Security (INFOSEC), operations security (OPSEC), physical and personnel security postures—to include development of system and site security plans
